☑ I am on the latest Hyper.app v2.0.0
☑ I have searched the issues of this repo and believe that this is not a duplicate

- **OS version and name**: Win10
- **Hyper.app version**: v2.0.0
- **Link of a Gist** with the contents of your .hyper.js:
- **Relevant information from devtools** *(CMD+ALT+I on macOS, CTRL+SHIFT+I elsewhere)*:
- **The issue is reproducible in vanilla Hyper.app**:

Issue

The issue can be simply reproduced by the following command

```
$ docker.exe run -it --rm ubuntu:14.04 /bin/bash
the input device is not a TTY.  If you are using mintty, try prefixing the command with
'winpty'
```

RecaaJo commented on 23 Apr 2018 • edited ▾

Just add 'winpty' in start of your cmd ,Try below:
```
$ winpty docker.exe run -it --rm ubuntu:14.04 /bin/bash
```

Why this happens? More details here:
http://willi.am/blog/2016/08/08/docker-for-windows-interactive-sessions-in-mintty-git-bash/

Why **Hyper** isn't compatible with Windows console programs?

---

cybertk commented on 25 Apr 2018   `Author`

I saw winpty is already carried in **Hyper**, why I still need to add `winpty` prefix? And the even worse is that I should install another winpty besides the one carried in **Hyper**.

---

samoldenburg commented on 30 May 2018 • edited ▾

To anyone potentially having a similar issue with docker, you may not need winpty.

I followed this guide to install docker on WSL rather than passing through to the windows.exe:
https://medium.com/@sebagomez/installing-the-docker-client-on-ubuntus-windows-subsystem-for-linux-612b392a44c4

Then I changed my `shellArgs` in `.hyper.js` from

```
shellArgs: ['--login', '-i', '/c wsl'],
```

to

```
shellArgs: ['--login'],
```

Seems to work fine now.
